IMPORTANT NOTIFICATION

International application No.
PCT/CA99/00807

International filing date (day/month/year)
03/09/1999

Priority date (day/month/year)
04/09/1998

Applicant

CONNAUGHT LABORATORIES LIMITED et al.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.

2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.

3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. **PCT/CA99/00807**

I. Basis of the report

1. This report has been drawn on the basis of *(substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments (Rules 70.16 and 70.17).)*
Description, pages:

1-25 as originally filed

Claims, No.:

1-13 as originally filed

Drawings, sheets:

1/3-2/3 as originally filed

Sequence listing part of the description, pages:

1-4, filed with the letter of 10.01.00

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☒ furnished subsequently to this Authority in written form.
- ☒ furnished subsequently to this Authority in computer readable form.
- ☒ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☒ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. **PCT/CA99/00807**

- ☐ the description, pages:
☐ the claims, Nos.:
☐ the drawings, sheets:

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

IV. Lack of unity of invention

1. In response to the invitation to restrict or pay additional fees the applicant has:

- ☐ restricted the claims.
☒ paid additional fees.
☐ paid additional fees under protest.
☐ neither restricted nor paid additional fees.

2. ☐ This Authority found that the requirement of unity of invention is not complied and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.

3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is

- ☐ complied with.
☒ not complied with for the following reasons:
see separate sheet

4. Consequently, the following parts of the international application were the subject of international preliminary examination in establishing this report:

- ☒ all parts.
☐ the parts relating to claims Nos. .

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims 2, 3, 5-10
	No: Claims 1, 4, 11-13

Re Item IV

Lack of unity of invention

The international preliminary examining Authority is of the opinion that the present application lacks unity within the meaning of Art. 34(3) and Rule 13.1 PCT.

It will be considered that the following separate alleged inventions are not so linked as to form a single general inventive concept:

- 1) Claims 5, 6 (completely), claims 1-4, 11-13 (partially): A vector comprising a sequence encoding a HPV16 E7 protein which has a reduced oncogenic potential due to deletion of amino acids 21-26
- 2) Claims 7-10 (completely), claims 1-4, 11-13 (partially): A vector comprising a sequence encoding the immunogenic epitopes of E7 (amino acids 11-20, 49-57, 82-90, 86-93) and of E6 (amino acids 29-38).

The general inventive concept underlying the above mentioned inventions 1) and 2), can be seen in the decreased oncogenicity of E7. The oncogenic potential was reduced by either deleting the RB-binding sequence (invention 1) or by assembly of the immunogenic epitopes of E7 and E6 without the intervening sequences (invention 2). However, said general inventive concept is not novel in view of D1.

The need for reduction of the oncogenic potential of E7 used for immunotherapy or vaccination was recognized in D1. The problem was solved by the provision of vaccinia virus vectors expressing fusion proteins of E6 and E7 from HPV 16 and HPV 18. The recombinant vectors are proposed for use as immunotherapeutics or vaccines for conditions related to HPV infection, such as cervical cancer (p. 4, l. 19-23). The oncogenic potential of HPV 16 E7 was reduced by replacement of cys 24 and glu 26 (cys 27 and glu 29 in HPV 18) with glycine (p. 12, l. 12-18; p. 17, l. 5-11; p. 25, l. 28 - p. 26, l. 14; Fig. 2). The two mutated residues are involved in RB-binding and the block of this interaction apparently reduces oncogenicity.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/CA99/00807

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability: citations and explanations supporting such statement

1. The present application concerns vectors expressing E6 and/or E7 protein of human papilloma virus (HPV). The oncogenic potential of E7 is reduced by a deletion (amino acids 21-26) or by assembly of the immunogenic epitopes of E7 and E6 without the intervening sequences. The constructs are to be used for DNA vaccination against HPV-associated cervical cancers. The applicants demonstrate experimentally that both constructs induce protective antitumor immunity in mice challenged with C3 tumour cells (examples 5-10).
2. Claims 1, 4, 11-13 lack novelty according to Art. 33 (2) PCT in view of D1. D1 describes vaccinia virus vectors expressing fusion proteins of E6 and E7 from HPV 16 and HPV 18. The recombinant vector is proposed for use as an immunotherapeutic or vaccine for conditions related to HPV infection, such as cervical cancer (p. 4, l. 19-23). The oncogenic potential of HPV 16 E7 was reduced by replacement of cys 24 and glu 26 (cys 27 and glu 29 in HPV 18) with glycine (p. 12, l. 12-18; p. 17, l. 5-11; p. 25, l. 28 - p. 26, l. 14; Fig. 2). Hence, the residues involved in binding of RB were mutated, thereby abolishing the immortalizing potential of E7.

Claims 2, 3, 5-10 are found to be novel over the cited prior art.

3. Claims 2, 3, 5-10 lack inventive step according to Art. 33 (3) PCT. For evaluation of inventive step, the two inventions identified in the previous communication (invitation to restrict or pay additional fees) are analysed separately.
- 3.1 Invention 1): Claims 5, 6 (completely), claims 2, 3 (partially): A vector comprising a sequence encoding a HPV16 E7 protein which has a reduced oncogenic potential

due to deletion of amino acids 21-26.

The closest prior art document is D1. The vaccinia vector of D1 expressing E6/E7 has reduced oncogenic potential due to mutation of the RB-binding site (p. 12, l. 12-18; p. 17, l. 5-11; p. 25, l. 28 - p. 26, l. 14; Fig. 2). The vector is to be used as an immunotherapeutic or vaccine for conditions related to HPV infection, such as cervical cancer (p. 4, l. 19-23). The difference to the vector of the present application is thus: i) another mutation in the RB binding site (i.e. deletion of amino acids 21-26) and ii) the use of a plasmid vector with CMV promotor instead of vaccinia.

The technical problem underlying the present alleged invention can therefore be seen in the provision of further vaccines against HPV-associated cervical cancer. The solution proposed cannot be considered involving an inventive step (Article 33(3) PCT) for the following reasons:

The closest prior art document D1 used vaccinia virus vectors for vaccination. D3 and D4 both disclose DNA vaccines for papilloma virus. Thus, the skilled person was well aware of the successful use of DNA vaccines for HPV E6 (D4) or E7 (D3). There was an existing need (mentioned in D1 p. 5, lines 10-15; or D4 p. 622) to improve the vaccines in terms of the oncogenic potential. Further, the skilled person knew from D1 that abolishment of RB-binding did reduce the oncogenic potential of HPV E7. D2 discloses that deletion of amino acid residues 21-24 of HPV16 E7 abolished binding of RB and mutation of E26 severely impaired RB-binding (p. 4103, right column, 2. paragraph). This showed clearly that the RB-binding site consisted of amino acids 21-26. It can therefore not be considered inventive to delete amino acids 21-26 for the purpose of reducing oncogenic potential. This is just an arbitrary selection of another possible mutation. It cannot be seen at present whether any unexpected technical effect is associated with this.

- 3.2 Invention 2): Claims 7-10 (completely), claims 2, 3 (partially): A vector comprising a sequence encoding the immunogenic epitopes of E7 (amino acids 11-20, 49-57, 82-90, 86-93) and of E6 (amino acids 29-38).

The feature which distinguishes alleged invention 2) from alleged invention 1) is

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/CA99/00807

the approach to reduce oncogenic potential by expressing immunogenic epitopes of HPV E6/E7.

The epitopes of E6 and E7 were known from D5. It is stated that the epitopes "could be used in vaccines for the prevention and treatment of cervical carcinoma" (abstract). It is shown that immunity against multiple epitopes can be induced by administration of a mixture of the four immunogenic HPV peptides E6.29-37, E7.11-20, E7.82-90, E7.86-93 (p. 5937, left hand column, last paragraph; Table II). Furthermore, it is stated in D4 that *"several E6-expressing constructs can be generated to express individually, complementary portions of the E6 protein. By combining these in a single multivalent E6 vaccine, it should be possible to induce the full spectrum of E6 antigenicity while, simultaneously, eliminating any pathogenicity associated with full-length E6 proteins."* Thus, D4 teaches to combine the individual epitopes in a single vaccine. D4 also teaches the use of HPV E6 DNA vaccines. DNA vaccines using the E7 coding sequence were also known from D3.

We hold the view that the skilled person would, in order to provide an alternative vaccine for HPV, use the well characterized epitopes of HPV E6/E7. In view of D4 and D5, it was obvious to use multiple epitopes in combination.

4. Claims 12 and 13 concern methods of treatment of the human or animal body. For the assessment of said claims on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Re Item VI

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. **PCT/CA99/00807**

Certain documents cited

Certain published documents (Rule 70.10)

Application No Patent No	Publication date (day/month/year)	Filing date (day/month/year)	Priority date (valid claim) (day/month/year)

This document discloses DNA vaccines of HPV16 E7 derived immunogenic peptides.

Re Item VIII

Certain observations on the international application

1. Claims 1, 4 and appending claims 2, 3, 11-13 do not meet the requirements of Article 8 PCT in that the matter for which protection is sought is not clearly defined. The claims attempt to define the subject-matter in terms of the result to be achieved which merely amounts to a statement of the underlying problem. Furthermore, the terms used to specify the result to be achieved are unclear. It is not clear to the skilled person what is meant by a "non-toxic T-cell epitope" or a "sequence detoxified to prevent oncogene replication".
2. The arbitrary terms designating plasmids employed in claims 3, 6, 10 are not generally accepted in the field in question, contrary to the requirements specified in the PCT Guidelines II-4.15.
